PROFESSIONAL SUMMARY

Data Analyst who takes problems end to end — raw data and SQL through to dashboards that answer a specific business question. Built a 1,033,036-transaction pipeline across a three-layer Snowflake warehouse with Tableau dashboards, a four-page Power BI risk report on a 255,347-loan portfolio, and a SQL Server to MySQL reporting migration including production data-quality remediation. Focused on validating numbers before they reach a report. Currently working in AI data quality evaluation at Innodata.

TECHNICAL SKILLS

SQL & Python: SQL (joins, CTEs, subqueries, window functions), Python (Pandas, NumPy), ETL pipelines

Business Intelligence: Power BI, Tableau, DAX, Power Query, data modeling, time intelligence (YoY/YTD), KPI dashboards

Analytics: RFM segmentation, cohort retention analysis, ABC analysis, EDA, statistics, data validation and cross-layer reconciliation

Databases & Warehousing: Snowflake (RAW/STAGING/ANALYTICS), SQL Server, MySQL, dimensional modeling, database migration

Tools: Advanced Excel (PivotTables, XLOOKUP, INDEX-MATCH), Jupyter, Matplotlib, Seaborn, Git/GitHub

EXPERIENCE

Innodata India Pvt. Ltd. | Data Annotator

July 2026 - Present

Remote | Freelance contract

- Evaluate AI-generated charts, dashboards and reports against their underlying data, verifying that titles, axes, labels and written descriptions accurately represent what the data shows, and correcting misinterpretations before client delivery.
- Test interactive dashboard and report controls, and assess outputs for factual accuracy, instruction adherence, completeness and usability against documented client criteria, working to per-task quality ratings.
- Handle 20-30 outputs daily spanning charts, dashboards, documents, code, web pages, image and speech data; selected for cross-skilling into additional task types following performance assessment.

PROJECTS

Customer Revenue & Retention Analytics

github.com/beingbrute/Customer-Revenue-Retention-Analytics

Python, Pandas, SQL, Snowflake, Tableau, GenAI (Ollama / Qwen3) · 2026

- Engineered a Python ETL pipeline for 1,067,371 retail transactions, reconciling 1,033,036 cleaned records across Snowflake RAW, STAGING and ANALYTICS layers and publishing two Tableau dashboards.
- Analysed £18.89M estimated net revenue and 5,852 customers using RFM segmentation and cohort analysis, finding that the Champions segment (24.74% of customers) generated 74.04% of net revenue at 21.65% weighted Month-12 retention.
- Classified 4,725 products into 12 categories using a local LLM with JSON schema validation, batching and rule-based cross-checks, enabling category revenue analysis without a paid AI API.

Loan Default Risk Analysis

github.com/beingbrute/Loan-Default-Risk-Analysis

Power BI, Power Query, DAX, Data Modeling, Time Intelligence · 2026

- Developed a four-page Power BI report on 255,347 loans, building a date-based semantic model with YTD/YoY DAX measures, dynamic field parameters and report-page tooltips.
- Identified that defaulted loans carry above-average balances by comparing Defaulted Amount Share (13.15%) with the 11.61% default rate, and isolated higher-risk segments including young adults (19.71%) and low-income borrowers (17.16%).

Inventory Demand & Supply Analysis

github.com/beingbrute/Inventory-Demand-Supply-Analysis

Power BI, SQL Server, MySQL, DAX, Power Query · 2026

- Detected and corrected a referential integrity break in production inventory data, then migrated the reporting source from SQL Server to MySQL and revalidated the Power BI report after the source change.
- Built DAX measures showing 79.97% demand fulfillment, 746 unfulfilled units and \$97.37K revenue at risk, demonstrating that shortage volume and financial exposure rank products differently.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

2019 - 2023

University Institute of Engineering and Technology (UIET), CSJM University, Kanpur

CERTIFICATIONS & ACHIEVEMENTS

Complete Data Analyst Bootcamp: From Basics to Advanced | Udemy | [Certificate](#)

September 2026

HackerRank: SQL 5-Star Gold Badge | Python 4-Star Silver Badge
